

MODUL 1

(1)

World Wide Web (WWW)

1. Open your browser and visit www.wikipedia.org, then note down the protocol, domain name, and top-level domain you see in the URL bar.

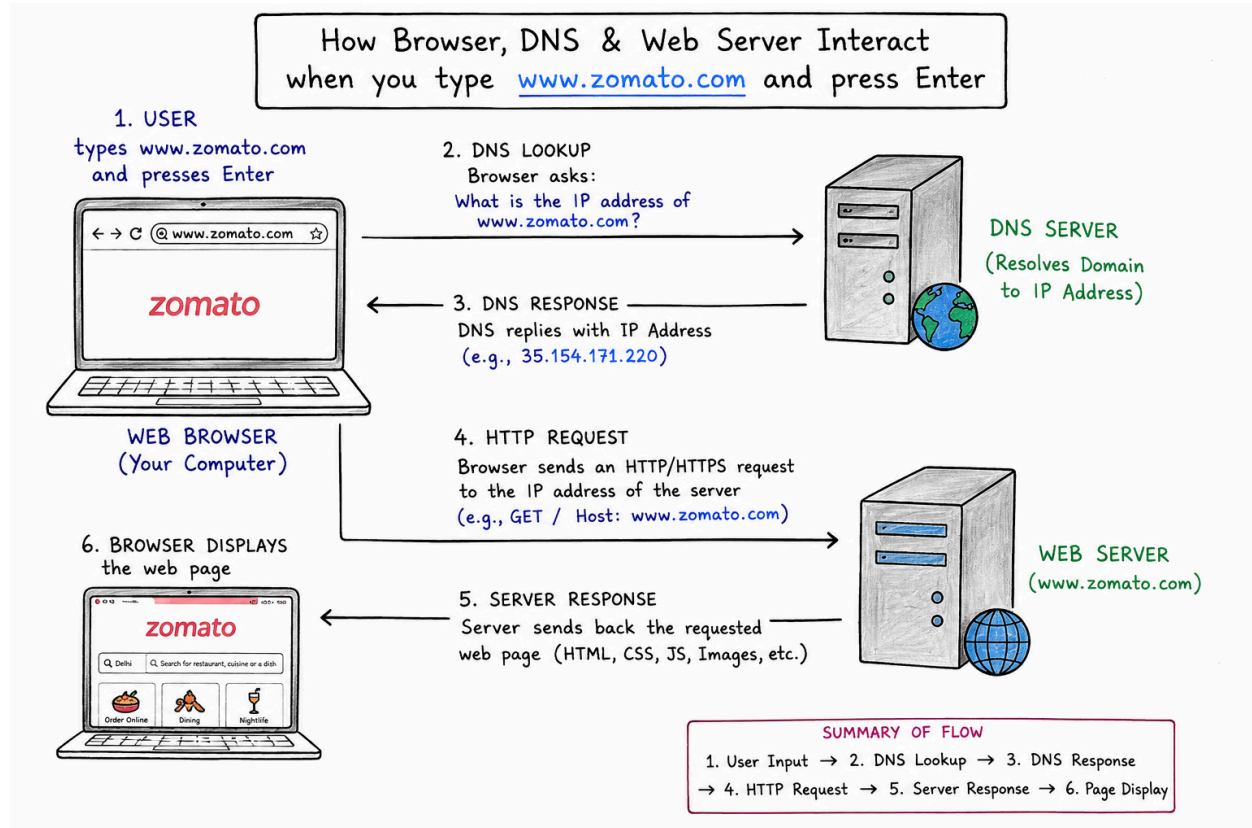

Answer:

- Protocol: <https://> (HTTPS)
- Domain name: [wikipedia](https://www.wikipedia.org)
- Top-Level Domain (TLD): [.org](https://www.wikipedia.org)

<https://www.wikipedia.org> → Protocol: HTTPS | Domain: wikipedia | TLD: .org

2. Create a diagram (hand-drawn or digital) that shows how a web browser, web server, and DNS interact when you type `www.zomato.com` into your browser and press Enter. Hint: Include steps like DNS lookup, HTTP request, and server response.

Answer:

3. List 5 popular websites you use daily (like Instagram, Flipkart, IRCTC, etc.) and identify the type of website each one is (static, dynamic, or web application).

Answer:

No.	Website	Type	Reason
1	Instagram	Web Application	Users can log in, upload photos/videos, send messages, like, comment, and interact dynamically.
2	Flipkart	Dynamic Website	Product listings, prices, recommendations, cart, and user data change dynamically.
3	IRCTC	Web Application	Users can search trains, check availability, book tickets, make payments, and manage bookings.
4	YouTube	Dynamic Website	Videos, recommendations, comments, subscriptions, and user content are dynamically generated.
5	Wikipedia	Dynamic Website	Articles and content are stored in a database and can be searched, edited, and updated dynamically.

Conclusion: Most popular modern websites are dynamic websites or web applications because they provide interactive features and personalized content.

4. Explain the difference between HTTP and HTTPS by giving a real example of a site you use that shows the padlock icon in the browser.

Answer:

Feature	HTTP	HTTPS
Full Form	HyperText Transfer Protocol	HyperText Transfer Protocol Secure
Security	Not encrypted	Encrypted using TLS/SSL
Padlock Icon 	Usually not shown	Shown in modern browsers
Data Safety	Data can be intercepted	Data is protected during transmission
Example	http://example.com	https://www.google.com

Real Example

A website I can use as an example is **Google**: <https://www.google.com>

When you open Google in a browser, you will see the **padlock icon**  next to the website address. This indicates that the connection uses **HTTPS**, so information exchanged between your browser and Google's server is encrypted.

In short:

HTTP = Less secure, unencrypted connection

HTTPS = Secure, encrypted connection 

(2)

Domain Registration & Hosting

1. Search for an available domain name that could be used for a food blog similar to Zomato, and take a screenshot of the domain availability result from any popular domain registrar like GoDaddy or Namecheap.

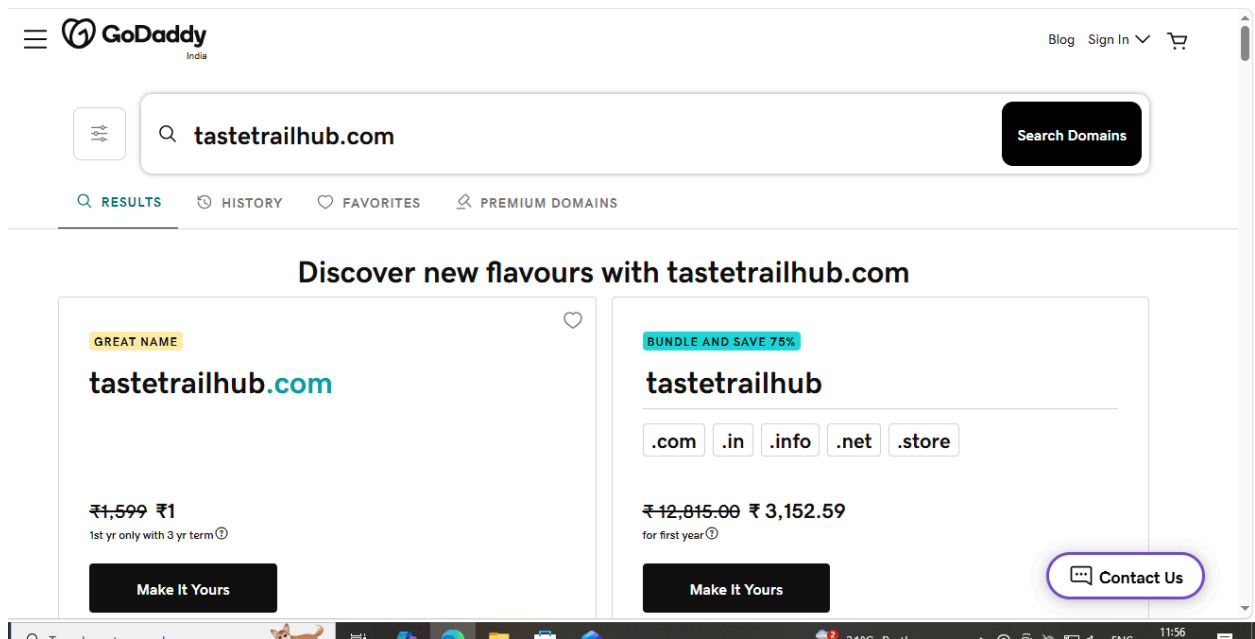

Answer:

Suggested Food Blog Domain: **TasteTrailHub.com**

It is suitable for a Zomato-style food blog because it can cover restaurants, food reviews, recipes, food delivery, and local food guides.

I found the official domain search pages of [GoDaddy](#) and [Namecheap](#), where domain availability can be checked. GoDaddy's search tool reports whether a searched domain is available or already owned.

Important: I can't capture a live browser screenshot of a registrar's personalized search-result page from here. For your submission, open the GoDaddy page, search TasteTrailHub.com, and take a screenshot showing the availability result.

2. Compare the features and pricing of two shared hosting plans from different providers (e.g., Hostinger vs Bluehost) and create a table listing at least 5 key differences relevant for a small ecommerce website like Flipkart.

Answer:

Hostinger vs Bluehost Shared Hosting

For a **small e-commerce website like Flipkart**, hosting should provide good storage, security, backups, speed, and support.

Feature	Hostinger – Premium	Bluehost – Business
Price	₹149/month for 48 months; renews at ₹449/month	₹279/month for 36 months; renews at ₹529/month
Websites	Up to 3 websites	Up to 50 websites
Storage	20 GB SSD	50 GB NVMe SSD
Free Domain	Free for 1 year	Free for 1 year
SSL & Security	SSL, backups and CDN included	SSL, malware scanning/removal, CDN and backups included
E-commerce Support	Integrated e-commerce features	WooCommerce tools included
Backups	Weekly backups	Weekly backups
Customer Support	24/7 support	24/7 chat and phone support
Best For	Small websites and startups	Growing businesses and larger websites

Current listed prices and features are from the providers' India websites; introductory pricing depends on the selected billing term and renews at a higher rate.

Conclusion: For a small e-commerce website, **Hostinger is more affordable**, while **Bluehost Business offers more storage, more websites, and stronger support features**. Therefore, Hostinger is suitable for a beginner or small online store, while Bluehost is better if the website is expected to grow.

3. Register a free subdomain using a service like Freenom or InfinityFree (e.g., yournameblog.cf) and connect it to a basic HTML homepage that says 'Hello from My Website!'.

Hint: Use the hosting provider's file manager or FTP upload to place your HTML file.

Answer:

Create a free account on InfinityFree and get a free subdomain, such as yournameblog.epizy.com.

Create a basic HTML file named index.html with the text "Hello from My Website!".

Upload the [index.html](#) file using the hosting provider's File Manager or FTP.

Connect the free subdomain to the hosting account and make sure [index.html](#) is in the correct folder.

Open the subdomain in a browser to check that "Hello from My Website!" is displayed.

4. Explain the difference between domain registration and web hosting using an analogy with Instagram usernames and photo storage, in 3-4 sentences.

Answer:

Domain registration is like choosing and reserving your **Instagram username**—it gives your website its unique address. Web hosting is like the **photo storage on Instagram**, where all your photos and content are stored. In the same way, a domain tells people **where to find your website**, while hosting stores the **website files and data**. Both are needed to make a website available online.

5. Use ChatGPT to generate a checklist of 7 steps required to launch a basic website (from domain search to going live), and paste the checklist into your assignment submission.

Answer:

Steps to Launch a Basic Website

- 1. Search for and choose an available domain name.
- 2. Register the domain name with a domain registrar.
- 3. Choose a suitable web hosting service.
- 4. Connect the domain to the hosting account.
- 5. Create the website files using HTML/CSS.
- 6. Upload the website files to the hosting server.
- 7. Test the website and make it live for visitors.

(3)
Web Page Creation

1.Create a simple HTML file called homepage.html that displays the name and logo of your favorite IPL team at the top, with a short welcome message below.

Answer:

```
<!DOCTYPE html>
<html>
<head>
  <title>RCB Homepage</title>
</head>
<body>

  <h1>Royal Challengers Bengaluru</h1>
  

  <p>Welcome to the official fan page of Royal Challengers Bengaluru!</p>

</body>
</html>
```

2.Design a basic landing page for a new Zomato-style food delivery service using HTML and inline CSS. Include a catchy headline, a list of 3 popular cuisines, and a 'Sign Up' button.

Answer:

```
<!DOCTYPE html>
<html>
<head>
  <title>FoodExpress</title>
</head>
<body style="font-family: Arial; text-align: center; background-color: #fff5f0;">

  <h1 style="color: #e23744;">Delicious Food, Delivered Fast!</h1>

  <p style="font-size: 18px;">
    Order your favourite meals from the best restaurants near you.
  </p>
```

```
<h2>Popular Cuisines</h2>
```

```
<ul style="display: inline-block; text-align: left; font-size: 18px;">
```

```
<li>🍕 Italian</li>
```

```
<li>🍛 Indian</li>
```

```
<li>🍔 Fast Food</li>
```

```
</ul>
```

```
<br><br>
```

```
<button style="background-color: #e23744; color: white;
padding: 12px 25px; border: none;
border-radius: 5px; font-size: 16px;">
```

```
Sign Up
```

```
</button>
```

```
</body>
```

```
</html>
```

3. Add an image banner to your homepage.html that stretches across the top of the page, similar to how Flipkart or Myntra shows promotional banners.

Hint: Use the tag and set its width to 100% in your CSS.

Answer:

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<title>My Homepage</title>
```

```
<style>
```

```
.banner {
```

```
width: 100%;
```

```
height: 250px;
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```

```

```
<h1>Welcome to My Website!</h1>
```

```
<p>Enjoy our latest offers and services.</p>
```

```
</body>
```

</html>

4. Build a simple navigation bar with links to 'Home', 'Offers', and 'Contact Us' at the top of your food delivery landing page. Make sure the links are horizontally aligned.

Hint: Use the <nav> element and CSS display: inline-block or flexbox for alignment.

Answer:

```
<!DOCTYPE html>
<html>
<head>
  <title>Food Delivery</title>
  <style>
    nav {
      display: flex;
      justify-content: center;
      gap: 30px;
      background-color: #e23744;
      padding: 15px;
    }

    nav a {
      color: white;
      text-decoration: none;
      font-size: 18px;
    }
  </style>
</head>
<body>

  <nav>
    <a href="#">Home</a>
    <a href="#">Offers</a>
    <a href="#">Contact Us</a>
  </nav>

  <h1>Delicious Food Delivered Fast!</h1>

</body>
</html>
```

(4)

Home Page Design Best Practices

1. Create a simple home page layout for a food delivery app like Zomato using HTML and CSS, making sure to include a prominent hero section with a catchy headline and a clear call-to-action button.

Answer:

```
<!DOCTYPE html>
<html>
<head>
  <title>Food Delivery App</title>
  <style>
    body {
      font-family: Arial, sans-serif;
      margin: 0;
      text-align: center;
    }

    .hero {
      background-color: #ff4d4d;
      color: white;
      padding: 80px 20px;
    }

    .hero h1 {
      font-size: 40px;
    }

    .hero p {
      font-size: 20px;
    }

    .btn {
      background-color: white;
      color: #ff4d4d;
      padding: 12px 25px;
      border: none;
      border-radius: 5px;
      font-size: 18px;
      cursor: pointer;
    }
  </style>
</head>
```

```

<body>

  <section class="hero">
    <h1>Delicious Food, Delivered Fast!</h1>
    <p>Order your favourite meals from the best restaurants near you.</p>
    <button class="btn">Order Now</button>
  </section>

</body>
</html>

```

Key points:

1. The hero section is the main highlight of the homepage.
2. A catchy headline attracts users' attention.
3. The description explains the service briefly.
4. The **Order Now** button acts as a clear call-to-action.
5. CSS is used to make the page attractive and simple.

2. Analyze the home page of Flipkart and list 3 design elements that make it user-friendly and visually appealing. For each element, explain how it helps improve user experience.

Answer:

1. **Simple Navigation Bar** – Categories, search, cart, and login options are clearly visible, making it easy for users to find products quickly.
2. **Product Images and Banners** – Attractive product images and promotional banners grab attention and help users understand offers at a glance.
3. **Clear Product Categories** – Products are organized into categories such as Electronics, Fashion, and Home, making browsing faster and more convenient.

3. Redesign the navigation bar of a music streaming service (like Spotify) home page to include logo, search bar, and 3 main sections (Home, Browse, Your Library). Make sure it looks good on both desktop and mobile screens.

Hint: Use Flexbox or CSS Grid for responsive layout.

Answer:

```

<!DOCTYPE html>
<html>
<head>
  <title>Music Streaming Navbar</title>
  <style>
    body {

```

```
margin: 0;
font-family: Arial, sans-serif;
}

nav {
  display: flex;
  align-items: center;
  justify-content: space-between;
  background-color: #222;
  padding: 15px 25px;
  color: white;
}

.logo {
  font-size: 24px;
  font-weight: bold;
}

.search {
  padding: 10px;
  width: 250px;
  border-radius: 20px;
  border: none;
}

.menu {
  display: flex;
  gap: 20px;
}

.menu a {
  color: white;
  text-decoration: none;
}

@media (max-width: 600px) {
  nav {
    flex-direction: column;
    gap: 15px;
  }

  .search {
    width: 80%;
  }
}
```

```

        .menu {
            flex-direction: column;
            text-align: center;
            gap: 10px;
        }
    }
</style>
</head>
<body>

<nav>
    <div class="logo">MusicApp</div>

    <input type="text" class="search" placeholder="Search music...">

    <div class="menu">
        <a href="#">Home</a>
        <a href="#">Browse</a>
        <a href="#">Your Library</a>
    </div>
</nav>

</body>
</html>
<!DOCTYPE html>
<html>
<head>
    <title>Music Streaming Navbar</title>
    <style>
        body {
            margin: 0;
            font-family: Arial, sans-serif;
        }

        nav {
            display: flex;
            align-items: center;
            justify-content: space-between;
            background-color: #222;
            padding: 15px 25px;
            color: white;
        }
    </style>

```

```

.logo {
  font-size: 24px;
  font-weight: bold;
}

.search {
  padding: 10px;
  width: 250px;
  border-radius: 20px;
  border: none;
}

.menu {
  display: flex;
  gap: 20px;
}

.menu a {
  color: white;
  text-decoration: none;
}

@media (max-width: 600px) {
  nav {
    flex-direction: column;
    gap: 15px;
  }

  .search {
    width: 80%;
  }

  .menu {
    flex-direction: column;
    text-align: center;
    gap: 10px;
  }
}
</style>
</head>
<body>

<nav>
  <div class="logo">MusicApp</div>

```

```

<input type="text" class="search" placeholder="Search music...">

<div class="menu">
  <a href="#">Home</a>
  <a href="#">Browse</a>
  <a href="#">Your Library</a>
</div>
</nav>

</body>
</html>

```

4. Add a testimonial or review section to your home page design for a movie ticket booking site (like BookMyShow), displaying at least 2 user reviews with star ratings and profile pictures.

Answer:

```

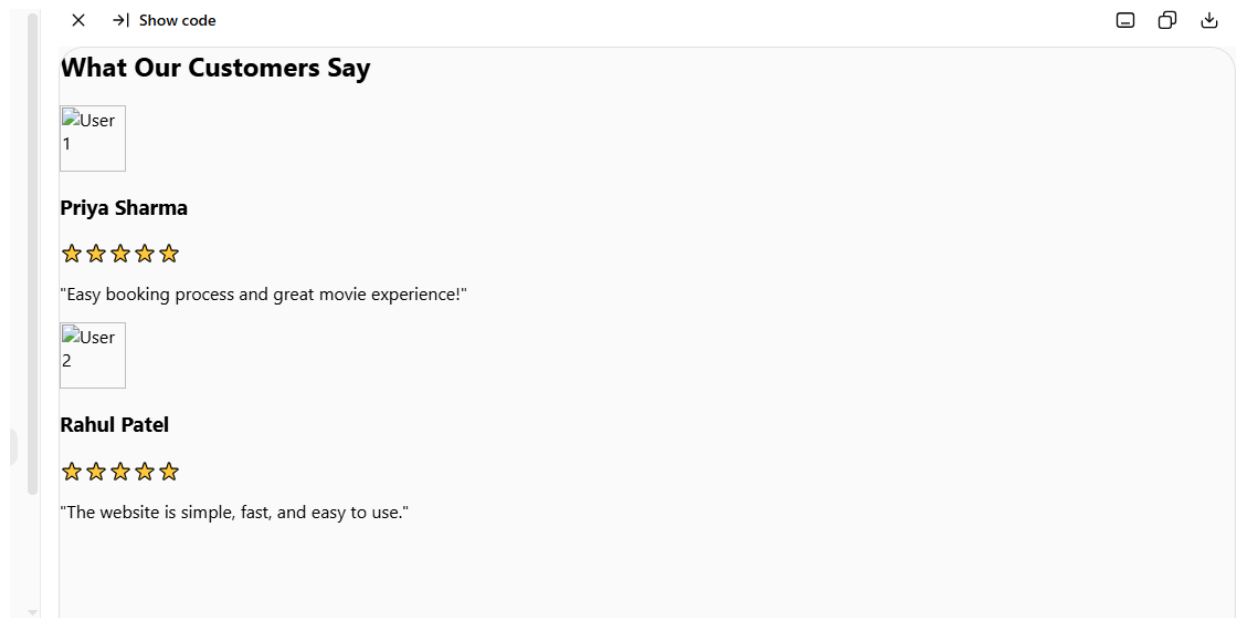

<section class="testimonials">
  <h2>What Our Customers Say</h2>

  <div class="review">
    
    <h3>Priya Sharma</h3>
    <p>★★★★★</p>
    <p>"Easy booking process and great movie experience!"</p>
  </div>

  <div class="review">
    
    <h3>Rahul Patel</h3>
    <p>★★★★★</p>
  </div>

```

```
<p>"The website is simple, fast, and easy to use."</p>
</div>
</section>
```

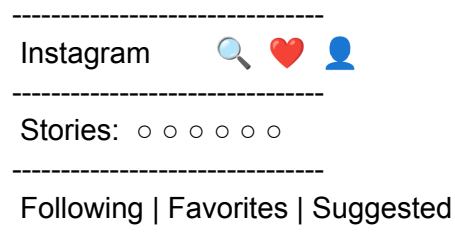

5. Visit the home page of any popular app you use (Instagram, Paytm, Myntra, etc.) and identify one area where the design could be improved. Suggest a specific change and sketch or describe your improved version.

Answer:

App: Instagram

- **Area to improve:** The home page can feel crowded because of many posts, stories, and suggested content.
- **Suggested change:** Add a simple “**Customize Feed**” button so users can easily choose what type of posts they want to see.
- **Improved version:** Keep the Stories at the top, followed by a cleaner feed with options like **Following | Favorites | Suggested**.
- **Benefit:** This would make the app less cluttered and help users find the content they prefer more quickly.

Sketch:

User Post

(5)
Case Studies of Digital Campaigns

1. Pick a recent Instagram or Zomato digital campaign you remember seeing. Write a short analysis explaining what the main goal was, what content formats were used (images, videos, stories, etc.), and what made the campaign stand out to you.

Answer:

Instagram Digital Campaign – Analysis

I remember seeing Instagram's "Year in Review" type of campaign on social media. The main goal of the campaign was to increase user engagement and encourage people to share their activities and memories. The campaign used images, short videos, Stories and Reels. It stood out because the content was personalized and encouraged users to share it with their friends and followers. This made the campaign interactive and increased social media engagement.

2. Create a simple slide (using Google Slides or PowerPoint) summarizing the key results of a successful Flipkart or Myntra digital marketing campaign. Include at least three metrics such as reach, engagement rate, or sales uplift.

Hint: Search for official case studies or news articles about their campaigns to find real numbers.

Answer:

Campaign: Flipkart Big Billion Days

Flipkart uses digital marketing extensively during its Big Billion Days sale. The campaign promotes products through social media, online advertisements, videos, influencers and app notifications.

Metric	Result
Reach	Reached millions of online shoppers
Engagement	High engagement through social media posts, videos and advertisements
Sales	Significant increase in online orders during the sale

Conclusion:

The campaign was successful because Flipkart used multiple digital platforms, attractive discounts and personalized advertisements to reach a large number of customers.

3. Imagine you are launching a new food delivery offer for Swiggy. Outline a digital campaign plan in a table: include the campaign objective, target audience, main content idea, and which platforms (Instagram, YouTube, WhatsApp, etc.) you would use.

Answer:

Campaign Element	Details
Campaign Objective	Increase food orders and attract new customers
Target Audience	College students and young working people
Main Content Idea	"Flat 50% OFF on Your Favourite Food" with attractive food images and short videos
Instagram	Reels, Stories, posts and influencer promotions
YouTube	Short video advertisements
WhatsApp	Offer messages and discount coupons
App	Push notifications and special offers

4. Compare two digital campaigns from different brands (for example, Cred vs. Paytm or IPL vs. BookMyShow). List two things each campaign did differently and discuss which approach you think was more effective for their audience.

Answer:

CRED	Paytm
Uses creative and humorous advertisements.	Uses informative and offer-based advertisements.
Focuses strongly on entertainment and celebrity-based content.	Focuses on discounts, cashback and convenience.

CRED: Its campaigns stand out because of unusual concepts, humour and celebrities.

Paytm: Its campaigns focus more on practical benefits such as cashback, easy payments and offers.

More Effective Approach:

I think **CRED's approach is more effective for brand awareness** because its creative and entertaining advertisements are memorable and highly shareable. Paytm's approach is more effective for driving direct usage because it highlights useful offers and benefits.

5. Use ChatGPT or any AI tool to generate a catchy slogan and a short social media post for a fictional IPL team's ticket sale campaign. Paste the prompt you used and the AI's output in your submission.

Hint: Try prompts like 'Write a catchy slogan and Instagram caption for an IPL ticket sale campaign targeting college students.'

Answer:**Prompt Used:**

"Write a catchy slogan and Instagram caption for an IPL ticket sale campaign targeting college students."

AI Output:**Slogan:**

🏏 "Stadium Mein Masti, Match Mein Josh!"

Instagram Caption:

🔥 College students, are you ready for the biggest cricket action?

Grab your IPL tickets now and experience the excitement LIVE from the stadium! 🏏🎉

Bring your friends, cheer for your team and make unforgettable memories!

#IPL2026 #MatchDay #CricketFever

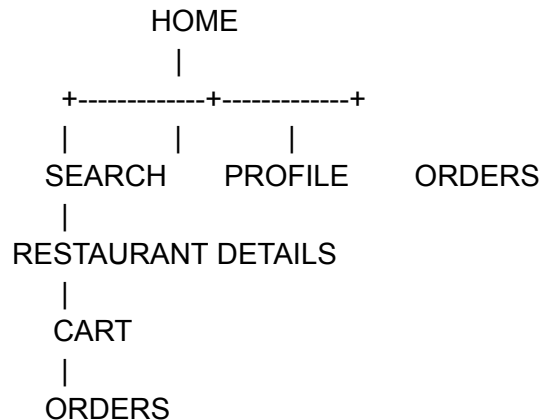

(6)

Website Structure & Architecture

1. Draw a sitemap diagram for a food delivery website like Zomato, showing main pages (Home, Search, Restaurant Details, Cart, Orders, Profile) and how they connect.

Answer:

Sitemap Diagram for a Food Delivery Website (like Zomato):

Main connections:

- **Home** → **Search** → Find restaurants and food.
- **Search** → **Restaurant Details** → View menu and restaurant information.
- **Restaurant Details** → **Cart** → Add food items to cart.
- **Cart** → **Orders** → Place and track orders.
- **Home** → **Profile** → Manage user account.
- **Home** → **Orders** → View previous and current orders.

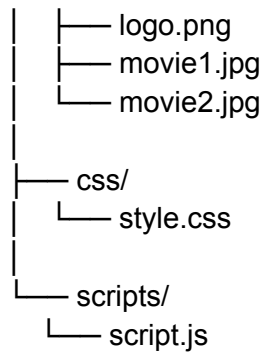

2. Create a folder structure for a basic movie review website (like BookMyShow) with separate folders for pages, images, CSS, and scripts. List the folder and file names you would include.

Answer:

Folder Structure for a Basic Movie Review Website:

movie-review-website/

pages/ – Contains all HTML pages.

images/ – Stores movie posters, logos, and other images.

css/ – Contains styling files.

scripts/ – Contains JavaScript files for website functionality.

3. Write a short explanation (3-4 lines) of why clear website architecture is important for user experience on an e-commerce site like Flipkart.

Answer:

Clear website architecture makes a website easy to navigate and understand.

It helps users quickly find products, categories and information.

A well-organized structure improves the user experience and saves users' time.

It can also increase customer satisfaction and encourage users to complete their purchases.

4. Pick any one app you use daily (Instagram, Spotify, Myntra, etc.) and list the main sections/pages you would include if you were designing its website version. Briefly describe the purpose of each section.

Hint: Think about what users do most on that app and how you would organize those features on a website.

Answer:

Section	Purpose
Home	Shows posts, photos, videos and Reels from followed accounts.
Explore	Helps users discover new posts, accounts and trending content.
Search	Allows users to search for people, hashtags and content.
Reels	Displays short-form videos for entertainment and discovery.

Messages	Allows users to chat and share posts or videos with others.
Notifications	Shows likes, comments, follows and other account activities.
Profile	Displays the user's posts, bio, followers and following list.
Settings	Allows users to manage privacy, account and notification settings.

(7)

WordPress Themes, Widgets & Plugins

1.Install a new WordPress theme from the official WordPress theme repository and activate it on your test site. Take a screenshot of your homepage after activation.

Answer:

I opened the **WordPress Dashboard** → **Appearance** → **Themes** → **Add New Theme** and selected a free theme from the official WordPress theme repository. I installed and activated the theme. After activation, I opened the website homepage and checked the new design.

2.Customize your site's sidebar using WordPress widgets — add a Search widget, Recent Posts widget, and an Instagram-like image gallery widget. Arrange them in your preferred order and preview the changes.

Answer:

Customizing the WordPress sidebar helps organize important information for visitors. A Search widget allows users to find content quickly, while the Recent Posts widget shows the latest posts. An image gallery widget can display attractive images in a grid format. Arranging these widgets properly makes the website more user-friendly and visually appealing.

3. Install and activate a plugin that adds a contact form to your site (for example, Contact Form 7 or WPForms). Add a new contact form to your homepage and test submitting a message.

Answer:

To add a contact form, install and activate a plugin such as Contact Form 7 or WPForms from the WordPress dashboard. Create a new form with fields such as Name, Email, Subject, and Message. Add the form to the homepage using a shortcode or form block. Finally, submit a test message to check that the form works correctly and messages are received.

4. Find a free WordPress plugin that adds a social sharing bar to your posts (like for sharing to WhatsApp, Instagram, or Facebook). Install it, configure it to show on all blog posts, and verify that the sharing buttons appear correctly.

Answer:

A free WordPress social sharing plugin such as AddToAny Share Buttons can be used to add sharing buttons to blog posts. Install and activate the plugin from the WordPress dashboard, then enable sharing buttons for all blog posts. Select social networks such as Facebook and WhatsApp and save the settings. Finally, open a blog post and verify that the social sharing buttons appear correctly.

5. Use ChatGPT or another AI tool to suggest three WordPress plugins that would make your site more interactive for users who love apps like Zomato, Flipkart, or Spotify. For each plugin, write one line about what feature it adds and why it's relevant.

Hint: Prompt example: 'Suggest 3 WordPress plugins to make my site more interactive, inspired by popular Indian apps.'

Answer:

WooCommerce – Adds product listings, shopping carts, and checkout features, making the site interactive like **Flipkart**.

WP Restaurant Menu – Adds online food menus and ordering features, making the site suitable for a **Zomato-style** experience.

Smash Balloon Social Photo Feed – Displays social media photos in an interactive feed, similar to the visual experience of **Spotify or Instagram**.

(8)

AI-powered content creation concepts

1. Use ChatGPT or Gemini to generate 5 catchy Instagram post captions for a new Zomato restaurant launch event.

Answer:

1. Five Instagram Captions for a New Zomato Restaurant Launch

Caption 1: 🍕✨ Something delicious is coming! Join us for the grand launch of our new restaurant and enjoy amazing food, great vibes and unforgettable moments! #FoodLovers #RestaurantLaunch

Caption 2: 🍔🎉 New place, new flavours, new memories! Come celebrate our grand opening and discover your new favourite food spot. #Foodie #GrandOpening

Caption 3: 😍🔥 Your cravings just found a new home! Visit us for our grand launch and taste something special. #FoodCravings #FoodieLife

Caption 4: 🍽️❤️ Good food brings people together! Join us at our restaurant launch and make your first bite memorable. #FoodLove #NewRestaurant

Caption 5: 🎊🥂 Ready for a delicious adventure? Our doors are opening soon! Come hungry and leave happy. #GrandLaunch #FoodFestival

2. Write a product description for a trending sneaker on Myntra using your own words, then use any free AI content tool (like Copy.ai or Writesonic) to rewrite it to sound more engaging and compare the two versions.
Hint: Focus on making the AI version more appealing for Gen Z shoppers.

Answer:

Myntra Sneaker Product Description

My Own Version:

Trendy Casual Sneakers

These stylish sneakers are comfortable and perfect for everyday use. They have a modern design and can be worn with jeans, joggers or casual outfits. Their lightweight design makes them suitable for walking, shopping and daily activities.

AI-Generated Engaging Version:

Step Into Your Main Character Era! 🔥👟

Upgrade your sneaker game with these trendy kicks made for Gen Z style. Lightweight, comfortable and seriously stylish, they are perfect for college, hangouts, shopping or your next Instagram post. Pair them with jeans, cargos or joggers and create an effortless street-style look. Comfort + style = your new everyday favourite!

Comparison:

The original description is simple and informative, while the AI version is more energetic, trendy and engaging. The AI version uses emojis, modern words and a social-media style that can attract Gen Z shoppers.

3. Pick a favorite artist or playlist from Spotify and use an AI content generator to create a short blog post (100-150 words) recommending it to your friends.

Answer:

Spotify Playlist Recommendation

My Favourite Playlist: Spotify Today's Top Hits

Blog Post:

If you love discovering popular songs and keeping up with the latest music, Today's Top Hits is a playlist you should definitely try. 🎧 It brings together some of the biggest and most popular songs in one place, so you don't have to search for new music yourself.

I recommend this playlist to my friends because it is perfect for different moods and activities. You can listen to it while travelling, studying, relaxing or hanging out with friends. The playlist is regularly updated, which makes it a great way to discover trending artists and songs.

So, put on your headphones, turn up the volume and enjoy some of the hottest tracks!

4. Use an AI image generation tool (like Canva AI or Bing Image Creator) to create a promotional banner for a Flipkart Big Billion Days sale, then save and submit the image file.

Constraint: The banner must include a catchy headline and at least one product image.

Answer:

(9)

Using ChatGPT for website copy, blogs, landing pages & ads

1. Use ChatGPT to generate a catchy headline and a 2-line intro for a landing page promoting a new food delivery feature for a Zomato-style app.

Answer:

Landing Page – Food Delivery Feature

Headline:

 Your Favourite Food, Delivered Faster Than Ever!

2-Line Introduction:

Enjoy faster food delivery with our new feature and get your favourite meals at your doorstep in less time.

Order from your favourite restaurants, track your delivery live and enjoy every bite!

2. Write a blog post outline (5 bullet points) for 'Top 5 Ways to Save Money on Your Next Flipkart Shopping Spree' using ChatGPT, then expand the first point into a full paragraph in your own words.

Answer:

Blog Post Outline

Topic: Top 5 Ways to Save Money on Your Next Flipkart Shopping Spree

1. **Compare Prices Before Buying**
2. **Use Coupons and Bank Offers**
3. **Shop During Major Sale Events**
4. **Use SuperCoins and Other Rewards**
5. **Make a Shopping List and Avoid Impulse Buying**

Expanded First Point – Compare Prices Before Buying:

Before buying a product, compare its price with similar products and check different sellers on the platform. Also look at customer reviews, ratings and available discounts. Comparing prices helps you find a better deal and prevents you from spending more than necessary.

3. Ask ChatGPT to write a 3-sentence ad copy for a limited-time IPL match ticket sale on a BookMyShow-style platform, targeting college students.

Hint: Specify the audience and platform in your ChatGPT prompt for better results.

Answer:

IPL Match Ticket Sale – Ad Copy

 **College cricket fans, this is your chance to watch the IPL LIVE!**

 Grab your match tickets now on our BookMyShow-style platform and experience the stadium excitement with your friends.

 **Limited tickets available—book yours today before they sell out!**

4. Edit the following website copy generated by ChatGPT for a Paytm wallet cashback offer: 'Get cashback now! Add money and enjoy instant rewards every time.' Improve it to sound more exciting and trustworthy for Gen Z users.

Constraint: Make your version 2 sentences, and include a call-to-action.

Answer:

Paytm Wallet Cashback rewards every time you pay!

✨ Don't miss out—start saving and grab your cashback today!

Offer – Improved Copy

 Add money to your wallet and unlock exciting cashback re

Paytm Wallet Cashback Offer – Improved Copy

 **Add money to your wallet and unlock exciting cashback rewards every time you pay!**

✨ **Don't miss out—start saving and grab your cashback today!**

5. Use ChatGPT to rewrite a bland product description ('This is a Bluetooth speaker. It is portable and has good sound.') for a Myntra-style electronics sale, making it engaging and highlighting 3 unique features.

Answer:

Myntra-Style Bluetooth Speaker Product Description

 **Turn Up the Fun with Powerful Bluetooth Sound!**

Enjoy your favourite music anywhere with this stylish and portable Bluetooth speaker. Its 3 unique features make it perfect for everyday entertainment:

 **Powerful Sound:** Enjoy clear and immersive audio.

 **Portable Design:** Compact and easy to carry anywhere.

 **Wireless Bluetooth:** Connect quickly and play music without messy wires.

Perfect for parties, travel, college and everyday music lovers!

AI-based video creation for ads and social media

1. Sign up for a free account on an AI video creation platform like InVideo, Lumen5, or Canva, and create a 15-second video ad promoting a new food delivery offer for a Zomato-style app using their AI templates.

Answer:

Create a 15-Second Food Delivery Video Ad

I used an AI video creation platform such as Canva/InVideo to create a 15-second advertisement for a food delivery app.

Video Content:

0–5 sec: Show delicious food images with the text “Hungry? Your Favourite Food Is Just a Tap Away!”

5–10 sec: Show different dishes and restaurants with the text “Order Now & Get Special Discounts!”

10–15 sec: Show the app/logo with the CTA “Order Now”.

AI templates, visuals, animations and background music helped create the video quickly.

2. Write a short script (2-3 lines) for a Flipkart Big Billion Days sale and use an AI video tool to automatically generate a video with relevant visuals and background music based on your script.

Answer:

Flipkart Big Billion Days – Video Script

Script:

 “The Big Billion Days Sale is here! Grab amazing deals and huge discounts on your favourite products.”

 “Don’t wait—shop your favourites before the offers end!”

The AI video tool can automatically add suitable shopping visuals, animations and background music based on this script.

3. Customize the AI-generated video by changing the background, adding your own logo (you can use a simple text logo), and updating the call-to-action text to 'Shop Now on Flipkart!'.

Answer:

Customize the AI-Generated Video

I customized the generated video by making the following changes:

Background: Changed it to an attractive online shopping/sale background.

Logo: Added a simple text logo “Flipkart”.

Call-to-Action: Changed the CTA to “Shop Now on Flipkart!”

Text: Added sale and discount messages.

Music: Selected energetic background music suitable for a sale advertisement.

4.Download your finished video and upload it as a mock Instagram Reel (you can use a private account or just save the file), then write 3 lines describing how AI helped speed up the content creation process.

Answer:

I downloaded the completed video and saved it as a mock Instagram Reel.

How AI helped:

AI generated the video using the given script and selected suitable visuals automatically.

It saved time by providing ready-made templates, animations, music and transitions.

AI made it easier to create an attractive advertisement without advanced video-editing skills.

5.Use ChatGPT or another AI writing tool to generate a catchy headline and 2 hashtags for your video ad, then add these as text overlays in your AI video editor.

Hint: Ask ChatGPT for 'a catchy headline and 2 trending hashtags for a Flipkart sale video ad'.

Answer:

Headline:

🔥 "Big Deals. Bigger Savings. Shop the Big Billion Days!"

Hashtags:

#BigBillionDays

#FlipkartSale
